Amending NS100 Field Recording of Network Assets

Summary

This Network Standard sets out the requirements of recording as-built asset information for Ausgrid's transmission and distribution networks. The objective of field recording is to provide an accurate record of the position, type and quantity of Ausgrid's assets, to enable those assets to be quickly identified and located at a later date. In addition, this information is used to maintain Ausgrid's Geographic Information System (GIS).

The document has undergone a full review of its content. Numerous changes were made, including the following general updates:

- Updates to references list and definition
- Quality Levels (Cl. 5.2 & 5.3)
- Recording Requirements (Cl. 6.6)
- Lodgement of Asset Information (7.0 & Table 2)

Other minor changes have been made, other than those itemised. Refer to grey shading in the document for details of modifications.

The document review date has been updated to 17/10/2019.

NSs, NSAs and other technical documents are available on Balin.
