Advice No. 2005 - 25/05/2020

Doc. Ref. Network Standard NS211 Annexure F – Amdt 0

TO: Customers, Accredited Service Providers and Ausgrid Staff.

Announcing Network Standard NS211 Annexure F Asbestos Product Guide

Summary:

This Product Guide is a collection of data sheets, each representing a unique asbestos-containing product which is often found on Ausgrid assets.

Each data sheet contains a description, identification, common names used to describe these products and photographs for an easy identification of the products for workers who may not have come across those products.

There is also a safety section describing the level of Personal Protective Equipment required, procedures, precautions and regulations required when working in the vicinity of, or removing those products.

The aim of this guide is to assist workers and trainers to better identify asbestos-containing products found on Ausgrid assets. This guide is available for download from the Asbestos Gateway on The Wire.

For ASP or External Contractor, all requests for site specific asbestos registers, product information and hazard reporting should be referred to the relevant Project Officer / Manager or alternately can be obtained by contacting Hazardous Materials on 02 9394 6961 or by email: hazmat@ausgrid.com.au

The document review date has been set to 13/05/2023.

NSs, NSAs and other technical documents are available on Balin.
